CHITRANG POTDAR

Backend Engineer · APIs, AWS, CI/CD, AI-integrated systems

Pune, India • potdarchitrang4@gmail.com • +91 7498307771 • linkedin.com/in/chitrang-potdar • github.com/Dev-Chitrang • dev-chitrang.github.io

PROFESSIONAL SUMMARY

Backend Engineer with experience building Python-based APIs, Backend systems, and AI-integrated pipelines in production.

Focused on clean system design, automation, and reliable deployments using Docker, AWS, and CI/CD, with an emphasis on clean and maintainable systems.

TECHNICAL SKILLS

Backend Python, Flask, FastAPI, RESTful APIs, JWT, 2FA (TOTP), Redis
Databases PostgreSQL, Microsoft SQL Server — schema design, indexing, query optimisation
DevOps & Cloud Docker, GitHub Actions, CI/CD, AWS EC2, Lambda, S3, Transcribe, API Gateway
AI/LLM Claude API, CrewAI, Gemini 2.0 Flash
ML/Data Scikit-learn, XGBoost, NeuralProphet, Pandas, MLflow, ZenML
Testing Pytest, Unit Testing, Coverage Reporting, Playwright
Languages Python (primary), SQL, JavaScript
Tools Git, GitHub, Postman, Linux

EXPERIENCE

Backend Engineer · ArrayPointer Pvt. Ltd., Pune *Oct 2025 – Present*

Investment Operations Platform

Stack: Python, Flask, PostgreSQL, Redis, Docker, GitHub Actions, AWS EC2, Pytest, Playwright

- Built multi-tenant architecture with strict data isolation across users, portfolios, and organizations at the query level.
- Developed REST APIs for portfolio review workflows, rejected order tracking, and financial calculators — integrated Jira API to auto-create and track operational issues.
- Engineered Redis-based session management, caching auth tokens to eliminate redundant DB hits on high-frequency endpoints.
- Built and owned CI/CD pipelines using GitHub Actions and Docker, ensuring consistent, repeatable deployments.
- Achieved 80%+ unit test coverage with Pytest; automated MoM generation and delivery via WhatsApp and email.
- Automated client-facing browser workflows using Playwright, saving ~2–3 hours/week of manual effort.

AI-Powered Meeting Intelligence Pipeline

Stack: AWS Lambda, API Gateway, S3, AWS Transcribe, Claude (Anthropic API)

- Designed async serverless architecture around API Gateway's 29-second timeout — request returns immediately while transcription and LLM processing run in the background.
- Pipeline: audio + agenda ingested from S3 → transcribed via AWS Transcribe → passed to Claude API for structured analysis (summary, agenda scoring, task list) → results returned via API Gateway.

Python Developer Intern · ArrayPointer Pvt. Ltd., Pune *Dec 2023 – Apr 2024*

Document Parsing · Revenue Forecasting

Stack: Python, PyPDF2, Camelot, Tabula, Pandas, XGBoost, Scikit-learn

- Built an automated PDF parsing pipeline for documents (Electricity bills and CAS files) — reduced manual extraction effort by ~70% with clean JSON output from unstructured sources.
- Developed a time-series revenue forecasting model using XGBoost with incremental learning, improving forecast accuracy by ~20% as new data was ingested.

PROJECTS

TaskHub — Multi-Tenant Project Management Backend *Aug – Sep 2025*

GitHub: github.com/Dev-Chitrang/TaskHub-Full-Stack-Project *Stack: FastAPI, PostgreSQL, Docker, GitHub Actions, Pytest*

- Built a multi-tenant SaaS backend with workspace-level data isolation and RBAC for secure access control.

- Engineered JWT-based auth end-to-end: email verification, 2FA via TOTP, and password recovery; containerised with Docker and deployed via GitHub Actions CI/CD.
- Implemented task management workflows supporting assignments, status transitions, and activity tracking.
- Added unit test coverage with Pytest across core API modules.

Retail DataOps & MLOps Platform *Mar – Jul 2025*

GitHub: github.com/Dev-Chitrang/data-warehouse-to-mlops *Stack: FastAPI, MSSQL, Scikit-learn, ZenML, MLflow, NeuralProphet, Docker*

- Engineered ETL pipelines using medallion architecture (Bronze/Silver/Gold) on SQL Server for structured data processing.
- Exposed Demand Forecasting, Customer Segmentation, and Recommendation model outputs via FastAPI; managed ML lifecycle with MLflow and ZenML.

AI Trip Planner — Multi-Agent Orchestration System *Sep – Oct 2025*

GitHub: github.com/Dev-Chitrang/Multi-Agent-Trip-Planner *Stack: CrewAI, Gemini 2.0 Flash, SerpAPI, Python*

- Designed a multi-agent system using CrewAI with three specialised agents (Flight, Hotel, Itinerary Planner), each with a defined role and toolset.
- Integrated real-time data retrieval via SerpAPI for live flight and hotel availability; powered reasoning with Gemini 2.0 Flash.

EDUCATION

B.E. Computer Engineering · Savitribai Phule Pune University, Pune *CGPA: 8.56 / 10*

Jun 2020 – Jun 2025
